Description of Problem

Please include a detailed description of the issues, as well as a description of and a copy of any professional studies, citations or reports from government entities, recommended solutions, and any cost information or estimates. If additional space is needed, please attach.

The RMUSD water well has been determined to exceed the Maximum Contaminant Level (MCL) for arsenic and also uranium levels have been recorded. Currently, the school maintains and operates its own water well located on its premise which supplies water to the schools, offices, bus barn teacher housing.

Navajo Tribal Utility Authority (NTUA) pipes in surface water and blends well water which meets the EPA requirements. Much of the needed infrastructure has been constructed and is in place: two .5 million gallon capacity storage tanks, four booster stations, and a six-in line ready to deliver water to RMUSD.

RMUSD proposes to correct this emergency deficiency by connecting to NTUA water line to serve the main campus domestic and fire protection water systems:
construction procurement, construction services and other supplemental services.
